Zagreb, Liječnicki Vjesnik, Vol 85, No 5, May 63; pp 489-495.

Abstract [English summary modified]: A general essay about the role of space medicine: protect from adverse effect of weightlessness and of isolation; ensure adequate microclimate (oxygen, carbon dioxide, air, temperature and humidity, pressures;) facilitate near-normal function of various physiologic events; coordinate with other sciences and technologies working toward space flights. Final paragraphs briefly summarize tasks of the Yugoslav Aeromedical Institute in Zemun. One Yugoslav and 7 US references.

Title : The Autumn Selection of Hens

Orig Pub : Przegl. jajcz.-drob., 1957, 5, No 10, 7-8

Abstract : Criteria for the selection and rejection of hens in the autumn. Those subject to rejection are: among the young hens- the slowly growing ones, with imperfect conformation, anemic and sluggish, and also those starting to lay eggs before reaching the age of 6 months; among the older hens, the slowly feathering ones, and those older than 2 years; among the roosters, those subject to selection should be the largest and sturdiest ones. There is pointed out the expediency of obtaining cross-bred hens from the interbreeding of two egg-laying breeds. -- P.F. Rokitskiy

TITLE: Modeling resistance curves by means of an integrator

PERIODICAL: Referativnyy zhurnal, Geofizika, no. 1, 1963, 35, abstract 1D195 (Nafta (Polska), 1962, 18, no. 8, 'Biul. Inst. Naftow', v. 12, no. 4, 7 (Pol.))

TEXT: Many physical effects may be modeled with the aid of electrointegrators. Resistance curves for a three-layer section with constant parameters were modeled, to see whether the electrointegrator could be applied in geophysical prospecting, and were compared with the curve obtained from measurements in a bore hole. An example of such a comparison is given. It is considered that electrointegrators may be used for both the construction of grids for electrical logging and in the solution of problems encountered in geophysical prospecting.

„Układ komunikacyjny Warszawy”. Miasto. No. 9, 1952, pp. 20—24, 4 figs., 1 tab.

Warsaw's pre-war traffic system. War damage and the state of the traffic system during the initial reconstruction stage (1945—1950). Prospective traffic system as designed by the Warsaw Town Planning Office. Methods adopted in designing this system: compilation of records of available transport facilities; analysis of the anticipated traffic to be carried in individual directions; selection of suitable transport means. On routes where traffic is likely to be heaviest — an underground railway system and a railway service are planned; an express tramway service is planned for the next future. A complementary service consisting of municipal tramways, motor- and trolley-buses is being provided to deal with minor traffic requirements. The time taken in transit from the remotest outskirts of the town should not exceed 45 minutes, and 65 per cent of such journeys should be accomplished in not more than 30 minutes.

 INST. :
 TITLE : Observations on Malignant Tumors of the
 Kidneys in Children.
 ORIG. PUE. : Polski tygod.lekar., 1957, 12, No. 17, 639-643
 ABSTRACT : Ten children with nephroma of the kidneys
 were treated by radical operation, followed
 by roentgen irradiation. Cure occurred in
 2 (20%) cases. A three-year survival follow-
 ing the operation is considered by the authors
 as a criterion of cure.

1963, pp 210-214.

Abstract: /Authors' English summary modified/ Phlegmasia
coerulea dolens is a seldom reported morbid state. Only
28 cases were reported until 1950 and only a few cases have
been presented since.

Three cases successfully treated by the authors are
reported. Pathogenesis, treatment and prognosis of this
rare morbid state are discussed. The pathogenic factors

TITLE: The four-terminal properties of impedance converters

SOURCE: Warsaw, Politechnika. Zeszyty naukowe, no. 96, Elektryka, no. 37, 1964, 87-113

TOPIC TAGS: impedance converter, four terminal network, teletransmission line

ABSTRACT: The paper discusses the properties of active four-terminal networks performing as impedance converters which convert positive loading impedance into negative input impedance at the open-circuited input terminals. The principle of operation of impedance converters of two types, one generating the electric arc-type of impedance and the other generating the dynatron type of impedance, is discussed. The properties of ideal and real impedance converters are described in terms of the coefficients of the chain matrix; for this purpose, the equivalent circuit of impedance converters is determined from their chain matrix representation. The properties of impedance converters are also described in terms of their resistance parameters, and for this purpose an equivalent circuit corresponding to the resistance parameters is established. Relationships between the input impedances and arbitrary loading impedances are derived. The conditions for the

L 51066-65

ACCESSION NR: AT 011790

conversion of impedance for the case of equivalent circuits derived from the resistance parameters, are established. The stability of an impedance converter for bilateral open-circuits and bilateral short-circuits is discussed and the conditions of stability are derived. The effect of load resistance and frequency variation on the active parameters of a converter is also discussed. Conversion coefficients for optimal loading conditions are derived as well as their frequency dependence. The conditions of optimal resistance conversion are formulated. A method is proposed of computing the "quality" factor of a converter, defined as the product of the relative coefficient of conversion linearity and the relative useable conversion bandwidth, taking into consideration the converter's basic parameters determined either analytically or by measurement. The discussion is illustrated by the computation of the characteristic parameters of a transistorized impedance converter which was developed in the Katedra Teletransmisji Przewodowej Politechniki Warszawskiej (Department of Guided Teletransmission of the Warsaw Polytechnic Institute). The computed "quality" factor of this converter is 116. Orig. Bri. has: 16 figures and 85 formulas.
